DETAILED ACTION

Response to Arguments

1. Claims 1, 4, 42, 43, 45-49 and 57-60 are pending.
Claims 1, 4 and 42 have been amended.
Claims 50-56 have been cancelled.
Claims 57-60 have been added.
Claims 1, 4, 42, 43, 45-49 and 57-60 are examined on the merits.

Maintained Rejections

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. The rejection of claims 1,4, 42, 43, 45-49 and 57-60 under 35 U.S.C. 102(b) as being anticipated by Vollmers et al. (Cancer 76(4): 550-558, August 15, 1995/IDS reference submitted January 26, 2004), as evidenced by Hensel et al. (Cancer Research 59: 5299-5306, October 15, 1999/IDS reference submitted January 4, 2002) is maintained. Claims 50-56 have been cancelled.

Applicants assert "Vollmers does not teach or suggest an 82 kD glycoprotein comprising the amino acid sequence of CD55 and a tumor specific glycostructure or the isolation of the same from membrane preparations of gastric adenocarcinoma cells by

chromatography", see bridging paragraph of pages 5 and 6 of Remarks submitted August 19, 2008. Applicants note, their specification discloses the SC-1 antibody detects the 82kD glycoprotein in membrane fractions, but not in the cell lysate of Vollmers. These points of view and arguments have been carefully considered, but found unpersuasive.

Applicants are reminded that the cell extract of Vollmers from stomach adenocarcinoma cell line 23132 inherently contains the isolated 82 kD glycoprotein, see page 552, Western Blots section. It is of little consequence the SC-1 antibody does not detect the 82kD in membrane fractions. The fact remains, inherently the 82kD glycoprotein has been isolated from the cell extract. The starting material from which the claimed product is derived is the same, hence the rejection is maintained for the reasons of record.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
